Our History

Design, strategy and workplace evolution

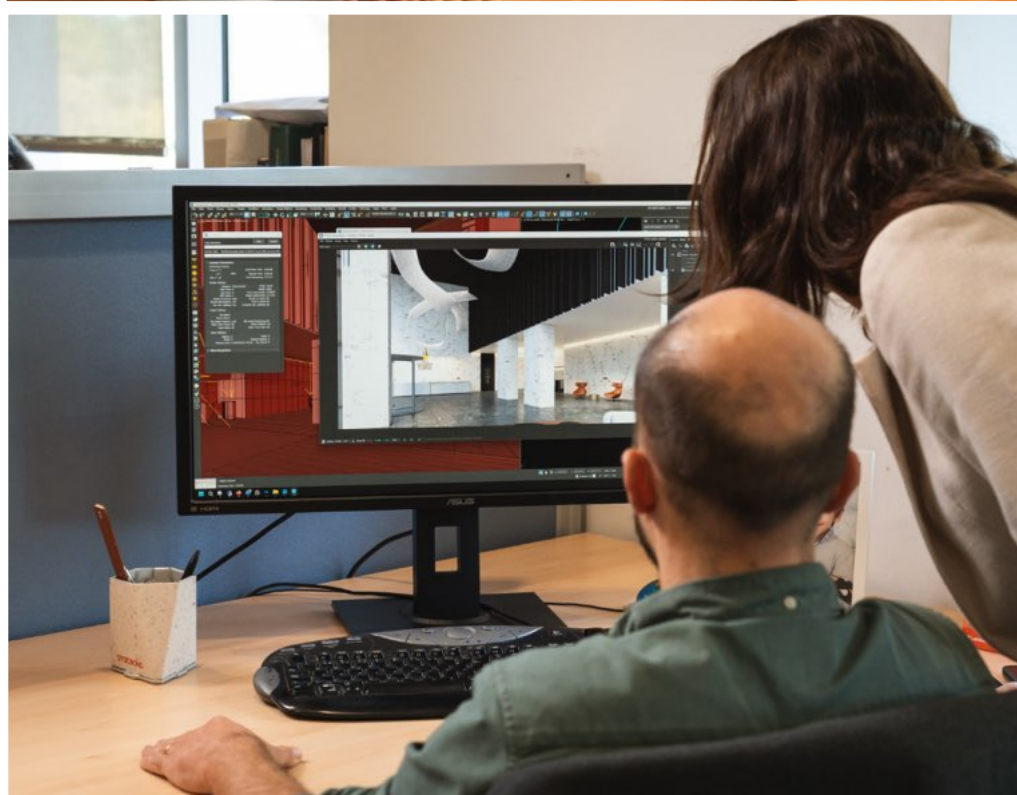

Since its foundation, NLA – Nuno Leónidas Architects has understood that successful workplaces require more than design alone, combining architecture, interiors, space planning and long-term operational strategy. This vision was strengthened through NLA's strategic role in the development of PROCOS Portugal, a parallel venture that introduced advanced expertise in corporate interiors, workspace strategy and facility management into its professional ecosystem. Through this experience, NLA expanded its know-how beyond conventional design, integrating international standards in space management, operational efficiency and long-term workplace performance. From the earliest project stages, NLA designs with the future in mind, considering adaptability, maintenance efficiency and the economic advantages of facility management. Using advanced tools, technology and strategic planning from concept onward, our projects create smarter, more sustainable environments that deliver lasting value to clients. Today, with the recent expansion of our Interior Design Department into Business Interiors, this expertise has been further integrated into a multidisciplinary offer that combines design excellence, workspace strategy and operational intelligence.

Our Evolution

A new generation of creativity strengthening and expanding our Interior Design department

From strategy... To performance

At NLA, our Interior Department understands that workplace design must respond to business objectives as much as human needs. Every detail is considered to create environments that improve productivity, reinforce company culture and adapt to future operational change.

Flexibility

At NLA, flexibility is essential to business interior design. Through modular planning, adaptable layouts and forward-thinking strategies, we create workplaces that evolve with growth, technology and new ways of working.

Design

NLA projects combine comfort, corporate identity, efficiency and innovation. Technical expertise and aesthetic clarity deliver workspaces that are functional, inspiring and business-focused.

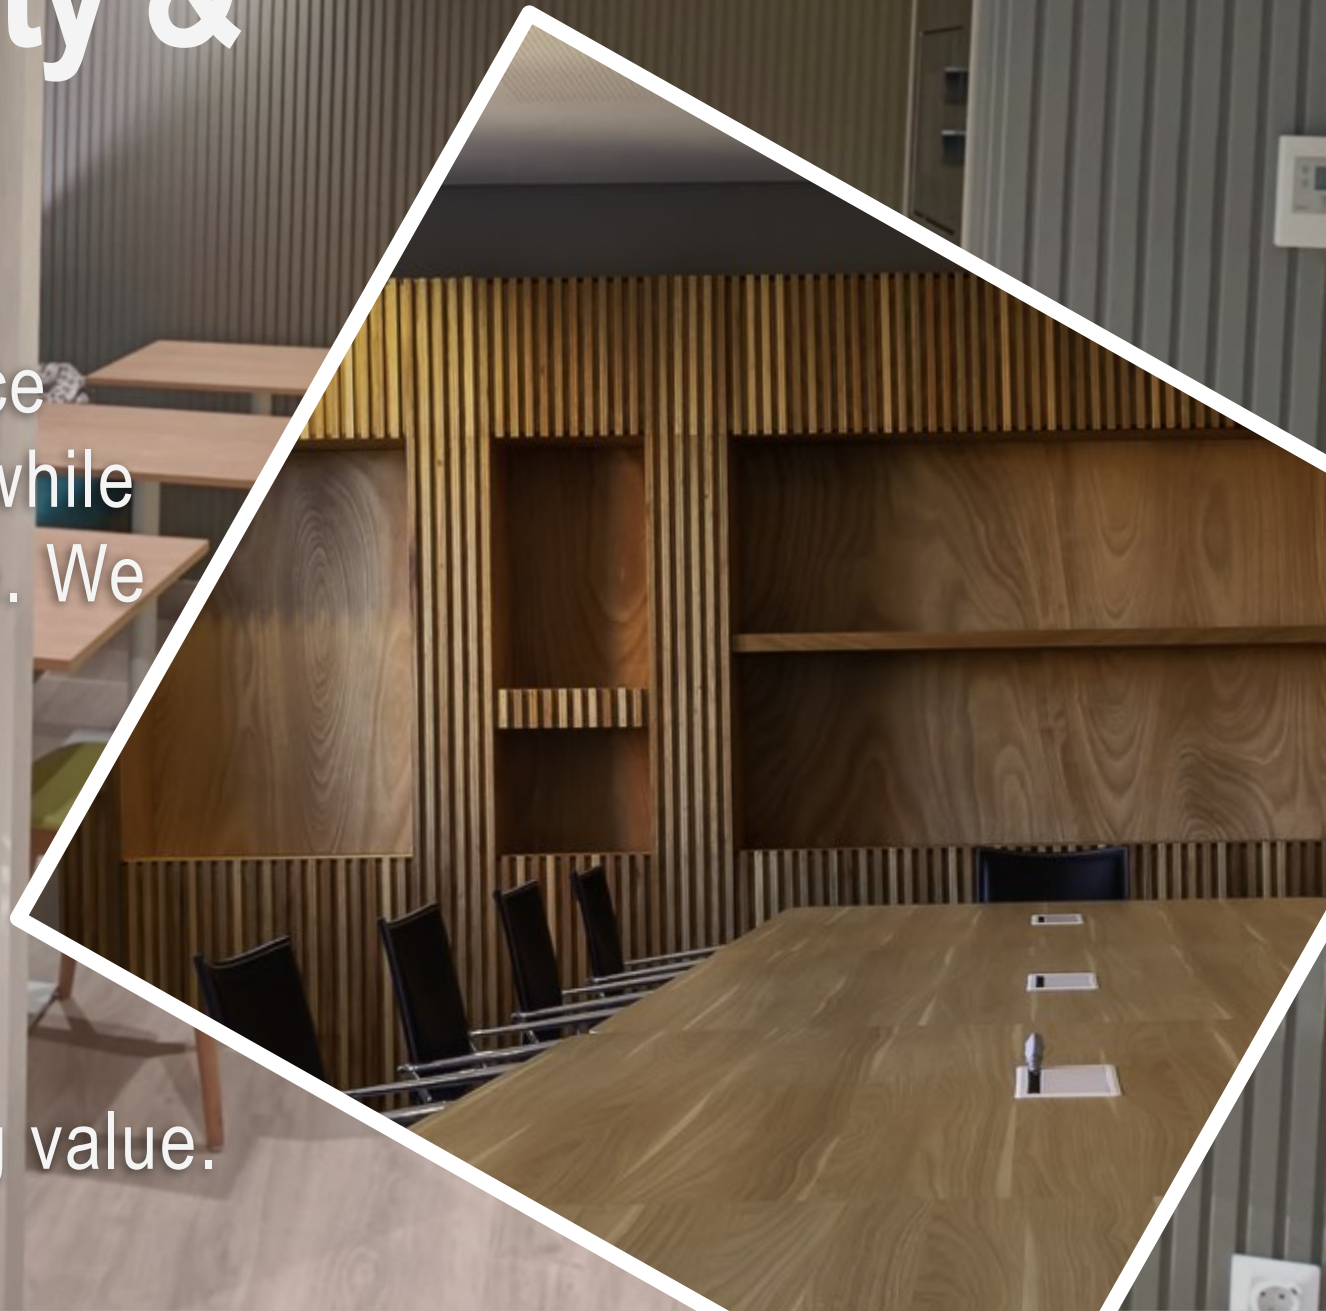

Human Experience & Integration

With decades of experience, NLA designs business interiors that promote wellbeing, collaboration and efficiency. Our approach integrates architecture, interior design and organizational needs into cohesive environments that strengthen people and brand identity.

Sustainability & Materiality

Our mission is to reduce environmental impact while improving performance. We prioritize sustainable materials, energy-efficient solutions and healthy environments to create smarter workplaces with lasting value.

Corporate Interiors

Designing adaptive workplaces for a changing world

The business interiors sector is evolving rapidly as technology, communication and organizational change reshape the modern workplace. Traditional offices are giving way to more dynamic, collaborative and flexible environments. At NLA, we understand that today's workplaces are defined by agility, innovation and adaptability. This demands business interiors that are versatile, intelligent and strategically planned.

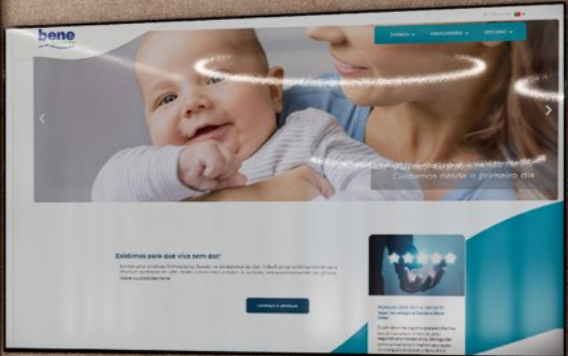

Our approach begins with detailed space planning to optimize efficiency, comfort and long-term flexibility. Through modular design and adaptable strategies, we create environments that support productivity and future growth. Today's companies require more than efficiency, they demand wellbeing, air quality and environmental responsibility. NLA designs smart, sustainable workplaces focused on intelligent functionality and enduring performance. Every business has its own culture and identity. Each project is a unique opportunity to create spaces that function effectively, communicate values and support long-term success.

Education Interiors

Designing learning environments for a changing world

The design of educational environments requires a clear understanding of evolving teaching methods, technologies and learning experiences. Traditional models are being reshaped by approaches that prioritize curiosity, self-learning, collaboration and adaptability.

At NLA, we understand that modern education spaces must go beyond knowledge transmission. Schools, universities and training environments must support formal and informal learning, technological integration and the exchange of ideas. This demands interiors that are flexible, intelligent and future-oriented. Our approach begins with detailed spatial planning to optimize functionality, wellbeing and adaptability. Through modular strategies and integrated technologies, we create environments that support diverse teaching methods while encouraging interaction and creativity. Today's institutions require more than classrooms, they need collaborative hubs, social spaces and advanced facilities that enhance both individual and collective learning. NLA designs education interiors as smart, sustainable environments that foster knowledge, strengthen community and inspire future generations.
